

Martin OM-28 Modern Deluxe: A Review of the Different Wood Options Available

Martin guitars are renowned for their exceptional quality and craftsmanship, and the **Martin OM-28 Modern Deluxe** is no exception. This high-end acoustic guitar is a testament to Martin's commitment to producing instruments of superior quality and sound. The Martin OM-28 Modern Deluxe boasts a number of impressive features, including its unique combination of traditional and modern design elements.

One important aspect to consider when choosing the **Martin OM-28 Modern Deluxe** is the wood options available for the guitar. Each wood option produces a distinct sound and has its own advantages and disadvantages. This guide will explore the different wood options available for the Martin OM-28 Modern Deluxe, including spruce, Adirondack spruce, rosewood, cocobolo, mahogany, and walnut. By understanding the properties of each wood option, players can make an informed decision about which option best suits their preferences and playing style.

Spruce Top Option for the Martin OM-28 Modern Deluxe

The Martin OM-28 Modern Deluxe is a high-quality acoustic guitar that offers exceptional sound and playability. One of the main features of this guitar is its wood options, which can greatly impact the sound and overall feel of the instrument. The first wood option available for the Martin OM-28 Modern Deluxe is the spruce top.

Spruce wood is a popular choice for guitar tops due to its strength, flexibility, and ability to produce a bright, clear tone. The spruce top option for the Martin OM-28 Modern Deluxe is made from high-quality Adirondack spruce, which is known for its exceptional stiffness and resonance. This results in a guitar with a powerful and clear sound, with plenty of projection and sustain.

One of the advantages of choosing the spruce top option is its versatility. The bright and clear tone of spruce wood works well with a wide range of playing styles and genres, from fingerstyle to strumming. Additionally, the spruce top option is typically more affordable than other wood options, making it a great choice for players on a budget.

However, there are also some disadvantages to choosing the spruce top option. Because of its brightness and clarity, the spruce top can sometimes be overly harsh or brittle in sound, particularly when played aggressively or with heavy strumming. Additionally, spruce wood is more susceptible to damage from humidity and temperature changes, which can impact the guitar's overall durability.

Overall, the spruce top option for the Martin OM-28 Modern Deluxe is a great choice for players

looking for a versatile, affordable, and high-quality acoustic guitar. Its bright and clear tone is perfect for a wide range of playing styles and genres, and the Adirondack spruce top ensures excellent projection and sustain.

Adirondack Spruce Top Option for the Martin OM-28 Modern Deluxe

The Adirondack spruce top is another wood option available for the Martin OM-28 Modern Deluxe. Adirondack spruce is a type of spruce tree that grows in the northeastern United States and eastern Canada. It is known for its strength and stiffness, which make it a popular choice for acoustic guitar tops.

One of the advantages of choosing the Adirondack spruce top option for the Martin OM-28 Modern Deluxe is the quality of sound it produces. Adirondack spruce is known for its loud and clear tone, with a strong midrange and bright treble. It is particularly responsive to a player's touch, making it a great choice for fingerpicking and other delicate playing styles.

Another advantage of the Adirondack spruce top option is its durability. Adirondack spruce is a dense and hard wood, which means it is less likely to dent or scratch than other softer woods. This can make it a good choice for musicians who plan to use their guitar frequently or who travel often with their instrument.

However, there are also some disadvantages to consider when choosing the Adirondack spruce top option. One of these is the cost, as Adirondack spruce is a premium wood and can be more expensive than other options. Additionally, Adirondack spruce can be more difficult to work with, which means that it may take longer to craft a guitar with this wood option.

In terms of comparison to other wood options for the Martin OM-28 Modern Deluxe, the Adirondack spruce top option is often compared to the Sitka spruce top option. While both types of spruce offer a clear and bright tone, Adirondack spruce is known for having a stronger and more complex tone. Sitka spruce, on the other hand, is more commonly used and can be a more affordable option.

Overall, the Adirondack spruce top option for the Martin OM-28 Modern Deluxe is a great choice for musicians who value a clear and strong tone with responsive touch. While it may be more expensive and difficult to work with than other options, it can be a worthwhile investment for those who prioritize quality and durability.

Rosewood Back and Sides Option for the Martin OM-28 Modern Deluxe

The rosewood back and sides option for the Martin OM-28 Modern Deluxe is a popular choice for many guitarists due to its rich, warm sound and stunning visual appeal. Rosewood is a dense and heavy hardwood that is known for its distinct tonal characteristics, which make it a great choice for acoustic guitars.

The Martin OM-28 Modern Deluxe with rosewood back and sides is particularly suited for players who are looking for a guitar with strong bass response and clear highs. The rosewood back and sides add depth and complexity to the guitar's tone, while the spruce top ensures that the sound is balanced and focused.

One of the advantages of choosing the rosewood option for the Martin OM-28 Modern Deluxe is its durability. Rosewood is a hard and dense wood that is resistant to wear and tear, making it a great choice for players who want a guitar that will last for years to come. Additionally, rosewood is naturally oily, which helps to protect the wood from damage and maintain its appearance over time.

However, one of the drawbacks of choosing the rosewood option is its price. Rosewood is a high-end wood that is more expensive than many other options, which can make the guitar a bit more costly. Additionally, some players may find that the weight of the rosewood makes the guitar a bit heavier than they prefer.

Compared to the other wood options available for the Martin OM-28 Modern Deluxe, the rosewood option offers a warm, rich tone that is particularly well-suited for fingerstyle playing and genres such as blues and jazz. However, players who prefer a brighter, more cutting sound may want to consider other wood options, such as Adirondack spruce or cocobolo.

Overall, the rosewood back and sides option for the Martin OM-28 Modern Deluxe is a great choice for players who want a guitar with a warm, rich tone and stunning visual appeal. While it may be more expensive than other wood options, its durability and tonal characteristics make it a worthy investment for serious musicians.

Cocobolo Back and Sides Option for the Martin OM-28 Modern Deluxe

Cocobolo wood is known for its unique properties, making it a popular choice for guitar backs and sides. It's a dense and oily wood that has a very distinct look with its rich, reddish-brown color and black grain lines. Cocobolo wood is also known for its excellent tonal properties, making it a great choice for acoustic guitars.

One of the most notable characteristics of cocobolo wood is its clarity and projection. It has a bright and focused sound that allows every note to ring out clearly, making it ideal for fingerstyle

playing and intricate melodies. Cocobolo wood also has a warm and full-bodied tone, with a strong midrange and plenty of sustain. This combination of clarity and warmth makes the cocobolo back and sides option a versatile choice that can work well for a variety of playing styles and genres.

When it comes to the disadvantages of choosing cocobolo wood for the Martin OM-28 Modern Deluxe, the main one is its price. Cocobolo wood is a high-end option, and its rarity and demand make it quite expensive. It's also a heavy wood, which can affect the guitar's overall weight and balance, although this is a minor concern for most players.

Compared to other wood options available for the Martin OM-28 Modern Deluxe, the cocobolo back and sides option is a great choice for players who prioritize clarity and projection in their sound. It's a high-quality option that's perfect for fingerstyle playing and intricate melodies, and it offers a warm and full-bodied tone that can work well in a variety of genres. However, it's important to consider the cost and weight of cocobolo wood when making your decision.

Overall, the cocobolo back and sides option is a fantastic choice for players who want a unique and high-quality sound from their Martin OM-28 Modern Deluxe. Its distinct look and excellent tonal properties make it a top choice for many guitarists.

Other Wood Options for the Martin OM-28 Modern Deluxe

In addition to the spruce, Adirondack spruce, rosewood, and cocobolo options available for the Martin OM-28 Modern Deluxe, there are also other wood options to consider.

One such option is mahogany, which is known for its warm and focused sound. Mahogany is often used for the back and sides of guitars and can provide a balanced tone with good sustain. This wood is particularly well-suited for players who prefer fingerpicking or lighter strumming.

Another option is walnut, which is a dense hardwood that produces a clear and bright tone. Walnut is often used for back and sides, and it provides a good balance between warmth and clarity. The wood has a distinctive look, with dark brown heartwood and light sapwood, and it can add a unique visual element to the guitar.

It's important to note that while the wood used in the construction of a guitar can impact its sound, other factors such as the bracing, neck design, and overall construction also play a significant role. It's recommended to try out guitars with different wood combinations to determine which one produces the desired tone and feel.

When choosing a wood option for the Martin OM-28 Modern Deluxe, it's essential to consider the player's style and preferences. A player who prefers a brighter, more focused sound may prefer a spruce top or a walnut back and sides. On the other hand, a player who wants a warm, balanced sound may prefer a rosewood or mahogany back and sides.

Ultimately, the best wood option for the Martin OM-28 Modern Deluxe is the one that feels and sounds right to the player. It's recommended to consult with a knowledgeable guitar dealer or luthier to get guidance and advice on choosing the best wood option for your needs.

The Martin OM-28 Modern Deluxe is a high-quality acoustic guitar that offers a range of wood options for players to choose from. In this guide, we have explored the different wood options available for the Martin OM-28 Modern Deluxe and their properties to help players make an informed decision about which option best suits their preferences and playing style.

When considering the wood options available for the Martin OM-28 Modern Deluxe, it's important to understand how the properties of each wood can affect the sound of the guitar. The spruce top option offers a bright, crisp sound with excellent projection, making it a popular choice for players who prefer a clear, articulate tone. However, the spruce top can be somewhat lacking in warmth and depth compared to other wood options.

The Adirondack spruce top option offers a similar bright, crisp sound as the standard spruce top, but with a greater level of complexity and richness in the midrange and bass frequencies. This makes it a popular choice for players who want a more complex, nuanced sound than the standard spruce top can offer.

The rosewood back and sides option offers a warm, rich sound with excellent bass response and projection. Rosewood is known for its ability to add warmth and complexity to the overall sound of a guitar, making it a popular choice for players who want a well-rounded, full-bodied sound.

The cocobolo back and sides option offers a similar warmth and complexity to the rosewood option, but with a slightly more pronounced midrange and treble response. This makes it a popular choice for players who want a more balanced sound with a bit more clarity in the midrange and treble frequencies.

In addition to these wood options, the Martin OM-28 Modern Deluxe also offers mahogany and walnut back and sides options. Mahogany is known for its warm, mellow sound with a focus on midrange frequencies, while walnut offers a slightly brighter, more balanced sound with a pronounced midrange.
